

Ecommerce Marketing Performance Dashboard

by Microsoft Power BI

Prepared By:
Ankita Raj

Project Overview

Used Power BI to develop an interactive **Ecommerce Marketing Performance Dashboard**. It analyzes sales, customer behavior, regional trends, and returns, converting raw data into actionable business insights through dynamic visualizations and KPI tracking.

The goal was to simulate a real-world BI solution, aiding management in monitoring performance, finding growth opportunities, and making data-driven decisions.

Actionable Insights

- Sales Performance
- Customer Behavior
- Regional Trends
- Return Analysis

Objectives of the Project

Revenue & Orders

Analyze overall ecommerce revenue and order trends

Purchasing Behavior

Track quantity sold and customer purchasing behavior

Regional Performance

Compare regional sales performance

Segment Contribution

Understand customer segment contribution

Return Patterns

Monitor product return patterns

Interactive Dashboard

Build an interactive dashboard with dynamic filtering

Tools & Technologies Used

Power BI

Dashboard development & data visualization

Excel

Data preparation and dataset management

DAX

KPI and calculated measure creation

Dataset Description

The dataset was designed to represent a real-world ecommerce business environment and included:

- Order details
- Customer segments
- Product information
- Regional sales data
- Monthly sales trends
- Return status
- Quantity sold
- Campaign-related data

Project Usage

300

Order records

200

Customer records

100+

Product records

60+

Campaign entries

Dashboard Features

The dashboard includes high-level **KPI Cards** that provide a quick snapshot of overall business performance, focusing on these key performance indicators:

Total Revenue

The total monetary value of all goods and services sold.

Total Orders

The total number of unique transactions processed.

Total Quantity Sold

The sum of individual product units purchased across all orders.

Revenue Trend Analysis

A line chart was used to analyze monthly revenue trends and identify seasonal fluctuations in sales performance.

Regional Performance Analysis

Bar charts compare revenue and quantity across regions to identify performance trends.

Key Regions

North

South

East

West

Identifies high-performing and underperforming markets.

Quantity by Region

Customer Segment Analysis

Segment-wise revenue contribution was visualized using donut charts to evaluate the purchasing behavior of key segments.

Target Segments

★ Premium Customers

👤 Regular Customers

+👤 New Customers

Evaluating contribution and purchasing behavior across the customer base.

Revenue by Segment

Return & Interaction Analysis

Return Analysis

Tracking returned orders and evaluating satisfaction patterns.

Interactive Slicers

Dynamic filtering for Region, Segment, and Month to improve dashboard usability.

Key Insights Generated

Revenue Trends

Revenue trends showed variations across different months.

Premium Segments

Premium customer segment contributed significantly to overall revenue.

Regional Performance

Certain regions demonstrated higher sales performance.

Return Analysis

Highlighted opportunities for improving customer satisfaction and product quality.

Business Value of the Dashboard

Business intelligence tools convert raw transactional data into actionable insights for organizations.

Real-Time Monitoring

Monitor sales performance in real time.

Marketing Strategy

Improve marketing strategies through data.

Operational Excellence

Optimize regional operations efficiently.

Customer Experience

Enhance customer experience significantly.

Strategic Decision-Making

Support strategic decision-making at all levels.

Conclusion

This project successfully demonstrates the application of Power BI in ecommerce and marketing analytics. By integrating KPIs, trend analysis, regional comparisons, and interactive visualizations, the dashboard delivers a professional business intelligence solution suitable for real-world decision-making environments.
